

Sinus Lift Implant Treatment Procedure With Cam-Log Isy İmplant

Özal İ, Turkuaz Ağız ve Diş Sağlığı Polikliniği, İstanbul, Turkey

Mr. Dt. İhsan Özal, İstanbul, ihvan.ozal@turkuaz.life

Summary of Case Study:

During the case study, a patient, in need of sinus lifting treatment with open recovery, was treated by using Cam-Log Isy implant.

Processes, Materials and Methods:

- ◆ Our 65 year-old male patient was admitted to our clinic to get rid of partial dentures, used for 15 years.
- ◆ In the x-ray it is noticed that the sinuses are floppy and radioopaque.
- ◆ The patient was referred to a doctor, specialised ear, nose and throat diseases.
- ◆ Radicular cyst was found in the ceiling of the left sinus, covering all the left part and in the right sinus, covering only half of the part.
- ◆ Patient was informed for that.
- ◆ He approved the treatment for the right sinus.
- ◆ And he decided to approve or not treatment for the left sinus according to the results of the right part.
- ◆ Sinus lift was applied to the right side.
- ◆ In the second day, patient stated that he gets better breathing.
- ◆ Four months later two Cam-Log Isy implants were placed and the operation was left for open recovery.
- ◆ After eight weeks, measure was taken and abutment was produced.
- ◆ Then porcelain restoration has been done on the abutment.

Conclusion:

In sinus treatment, with open recovery, Cam-Log Isy implant was used successfully.
